Smart Coating Device

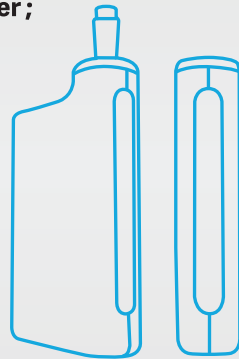

minimize
cross-contamination !

iCover Smart Coating Device is a battery-powered device which combines smart technology, functionality, quality, design and innovation. With a simple insertion of dental handpieces and other devices, **iCover** quickly and automatically coats the devices with protective sleeves.

iCover Smart Sleeves **have been superiorly designed to protect your dental handpieces and other devices** used in the dental operator from intraoral debris that can be lodged in very hard to clean areas. This reduces pre-sterilization clean up time, minimizes cross contamination between patients and protects your devices from scratches.

The following devices can be easily coated by **iCover** ;

- Dental handpieces
- Ultrasonic scalers
- Endodontic motors
- Light-curing optical fibers
- Air polishing handpieces
- Digital x-ray sensors (Size#0 and #1)
- Dental chair light handles
- Microscope handles
- Saliva suction adapters
- Pens
- Tips and more

PRODUCT FEATURES

- Automatically coats dental devices with an elastic sleeve
- iCover Smart sleeve design makes it a perfect fit for all kinds of handpieces and other devices
- Pre-cut opening on iCover smart sleeve makes it easier for bur insertion
- Practical and efficient decreasing preparation time between patients
- iCover smart sleeve protects hard to clean areas from debris
- Cuts off pre-sterilization clean up time of handpieces
